drummer Earl Palmer
able to conjure up the one lick, fill or effect that perfected the sound. Some of his best work is found on those records.

There's little else to say about Hal Blaine that the music itself doesn't communicate. But I'll tell you one experience I had that showed me just how widespread his influence has been. Hal was famous for rubber-stamping his name upon all the charts to which he contributed. In 1981, after one of our concerts at Wembley Arena, Bruce asked me into his dressing room. He pointed to the wall and said, "Look at that." I looked at the wall but didn't see anything except peeling wallpaper. "Look closer," he said. Finally, I knelt down to the spot he was pointing to, and — to my great surprise — in a crack in the paper, rubber-stamped on the wall, there it was: HAL BLAINE STRIKES AGAIN.

KING CURTIS

By David McGee

That the saxophone found a place in rock & roll history is almost exclusively due to the ferocity of the contributions made by King Curtis Osley to a host of barn-burning singles in the late 1950s, when he played sideman to the Coasters, for starters, and numerous other top R&B names of the era.

Born in Fort Worth, Texas, in 1934, King Curtis was steeped in gospel music at an early age, thanks to his father, who played guitar in a sanctified church band. He was all of ten years old when he heard Louis Jordan playing saxophone on the radio and found his life's path suddenly made clear. Breaking in on alto sax, he later moved to tenor sax, put a band together and began working local clubs. Inspired and influenced by a host of tenor-sax giants — including Lester Young, Illinois Jacquet, Arnett Cobb, Dexter Gordon, Gene Ammons, Stan Getz, Coleman Hawkins and Charlie Parker — Curtis developed an individual and versatile style that found him equally at home in high-minded jazz bands that placed a premium on improvisation and in house-rockin' R&B outfits whose sole purpose in life was to get the audience on its feet and keep it there. His was a macho sound with heart, deep and probing like Young in the lower register, crystalline and crying like Getz in its upper register. Jazz, gospel, blues, R&B — Curtis had the whole package together by the mid-Fifties when he moved to New York and began doing session work for Atlantic Records. Over the next few years he helped define the spirit of early rock & roll and R&B with his now widely emulated honking, stuttering tenor solos; later he made an effortless transition into soul. "Yakety Yak," the Coasters' chart-topping single from 1958, introduced the Curtis sound to the masses; his mile-long list of credits includes sessions with Aretha Franklin, whose band he led on some of the most important soul recordings in history. For good measure, he also wrote "Reminiscing" for Buddy Holly and played on the track. These recordings are why King Curtis is honored tonight.

At the same time he was becoming one of the most in-demand session men around, he also cut some wonderful solo albums. Live at Fillmore West exhibits Curtis the bandleader at his absolute best on a night when his extraordinary players included Bernard Purdie, Jerry Jemmott and Cornell Dupree. His 1962 "Soul Twist" single hit Number One on the R&B charts and the Top Twenty on the pop charts, and made such an impression on Sam Cooke that he referred to it in "Having a Party." But nothing King Curtis did on his own ever scaled the Prometheus heights of his sax work as a sideman, where he mastered the ability to be an individual within a group, standing out but never overshadowing the artists he was supporting and mastering the little nuances that made winners of the records on which he played. His was a rare voice, a rare sensibility, a rare soul; and that sound — whether it be caressing and tender, protesting, jubilant or celebratory — defined the man even as it became bigger than the man. Still, in the end King Curtis owns his sound — every marvelous, nuanced phrase of it — and remains the unassailable template to which succeeding generations of session sax players aspire.

JAMES JAMERSON

By Allan "Dr. Licks" Slutsky

In 1959, on the day James Jamerson first walked into Berry Gordy Jr's basement recording studio on Detroit's West Grand Boulevard, the electric bass was still an infant. Leo Fender's 1951 brainchild had yet to find an identity — a situation that ended with the first note Jamerson played on a Motown record. In one momentous and soulful trifecta, the instrument found its voice, a fledgling record company discovered its heartbeat, and a generation took a bold step toward finding its groove.

As a core member of Motown's legendary Funk Brothers studio band, Jamerson spent the next fourteen years cranking out a seemingly endless conveyor belt of pop and R&B masterpieces. "Bernadette," "Nowhere to Run," "I Heard It Through the Grapevine," "You Keep Me Hanging On," "My Girl" and "I Was Made to Love Her" were driven by bass lines with previously unheard of levels of complexity, power, invention and emotion, which effortlessly flowed through Jamerson's powerful bear-claw hands and the '62 Fender Precision bass he affectionately dubbed "the Funk Machine." Anytime he locked in with the Funk Brothers, and in particular with his ultimate soulmate, drummer Benny Benjamin, it was all over. The world's dance floors didn't stand a chance.

Music had always come easily to Jamerson, but life, on the other hand, did not. A tormented genius with an explosive temper and a Jekyll and Hyde personality, Jamerson's battle with internal demons and alcoholism was reflected in his music. A spiritual, almost mystical man at times and a street brawler at others, Jamerson spoke of finding musical inspiration from sources as diverse as "a flower swaying in the wind" to "watching the way a fat woman's behind moved when she walked."

Regardless of the tempest seething inside him, he was the baddest bassist on the planet, and he knew it. Around the world, aspiring bass players were alternately inspired and terrified by his four-string exploits. Other labels' producers consistently asked their session bassists to "play like that guy from Motown." He was the king. And then it all abruptly ended, when in 1972 Motown moved to Los Angeles.
Following the company to the West Coast, Jamerson spent the last ten years of his life trying to recapture the glory he had experienced in Detroit. But as much as he tried, the scene was foreign to him, and without the emotional support of Hitsville's Funk Brothers, Jamerson faltered. Alcoholism and emotional problems diminished his talents, eventually ending his life in 1983.

At Jamerson's funeral, Stevie Wonder eulogized how James had changed the fabric of his and all of our lives. Certainly, the legendary bassist's imprint has been indelibly etched onto our popular culture: Every time you've ever partyed to a Motown record, that seismic event making your feet move was James Jamerson's bass. When backseat Romeros across America made their best moves to the soundtrack of Smokey's silky smooth voice crooning through the dashboard speaker, Jamerson was right there. And as G.I.s shivered with fear in some God-forsaken Southeast Asia foxhole and found a few moments of solace in Marvin Gaye's "What's Going On," Jamerson was there too.

By the time his Motown tenure ended, Jamerson had played on a staggering total of fifty-six Number One R&B hits and twenty-three Number One pop hits. Additionally, thousands of chart-toppers have come from artists whose bassists have copied him. It wasn't thievery or plagiarism — it wasn't even homage. Those players were just following a glorious tradition, using the vocabulary of the instrument pioneered by the brilliant James Jamerson.

**Scotty Moore**

_Cotty and Bill [Black] really evolved that rockabilly sound through discussions we had right there in the studio," recalled Sam Phillips. "I credit Scotty with being one of the easiest persons to work with and for having a real desire to be innovative. His mind was always open and that was an awful lot of help to me... He had been around the studio for a while, hoping that there was some way I could use him. He was sympathetic to what I was trying to do — come up with something a little different. One thing I did not like was that Scotty was a great fan of Chet Atkins, because I didn't have that kind of playing in mind. But, like I say, he was willing to try something else and was real keen to succeed."

In that nutshell, Phillips (who was speaking to Colin Escott and Martin Hawkins for their book *Good Rockin' Tonight*) summarized everything that was and is special about Winfield "Scotty" Moore, one of the architects of rock & roll guitar. Even the muted criticism regarding Atkins' influence speaks to Moore's strengths. Like Atkins, Moore plays with precision, hitting every note cleanly, but still manages to convey a loose-jointed, swinging feel that propels the music forward.

Of course, propelling the music forward is what Scotty Moore is all about. The Gadsden, Tennessee-raised guitarist has played on hundreds, maybe thousands, of sessions in his time, but it was the groundbreaking support he lent to Elvis Presley's early recordings that made his The Guitar That Changed the World (as per the title of his lone, 1964 solo album, reissued last year by Razor & Tie). Whereas the Sun label's other hotshot guitarist, Carl Perkins, was establishing a fundamental rockabilly/rock & roll guitar vocabulary built on country blues, traditional country and honky-tonk styles, Moore's approach incorporated those influences as well as stylistic flourishes picked up from jazz guitarists Django Reinhardt and Tal Farlow and more than a hint of the pop flavor redolent in Chet Atkins' work. These touchstones merged beautifully behind Presley's singing and solid rhythm-guitar support and Bill Black's thumping, doghouse bass: Moore felt the moment, then added exactly what was needed, without grandstanding. His sense of the unfolding drama was marked as much by judicious playing as it was by a commitment to heightening the passion with precisely the right combination of chords and notes necessary to raise the whole endeavor to levels of almost...
WHEN THE BEATLES FIRST SIGNED WITH PARLOPHONE IN 1962, THE NOTION THAT A SELF-CONTAINED ROCK & ROLL BAND WOULD ACTUALLY PLAY ON ITS OWN RECORDS WAS A PRETTY RADICAL CONCEPT. BY DEFINITION, THE MUSICIANS WHO MADE UP THE RANK AND FILE OF SUCH GROUPS HAD NEITHER THE READING SKILLS NOR INSTRUMENTAL TECHNIQUE DEEMED NECESSARY TO MAKE QUALITY RECORDINGS. THIS INDUSTRY WISDOM AND PRACTICE HAD BEEN PASSED DOWN FROM TIN PAN ALLEY AND HAD, IN TURN, BEEN SUBSUMED AS THE EVERYDAY NORM IN THE FIELDS OF COUNTRY, RHYTHM & BLUES AND, OF COURSE, ROCK & ROLL.

NATURALLY, THERE WERE EXCEPTIONS, ALTHOUGH MOST OF THESE WERE CONFINED TO THE DOMAIN OF INDEPENDENT LABELS. ELVIS PRESLEY HAD MADE HIS EARLIEST SUN RECORDINGS WITH THE SAME BAND THAT BACKED HIM ON LIVE GIGS. RHYTHM & BLUES ARTISTS LOUIS JORDAN, JAMES BROWN AND RAY CHARLES REGULARLY RECORDED WITH THEIR JUSTIFIABLY REVERED ROAD BANDS. THAT SAID, THE MAJORITY OF SEMINAL ROCK & ROLL, POP AND A SIGNIFICANT PERCENTAGE OF R&B RECORDINGS OF THE LATE 1940S THROUGH THE MID-1960S WERE CUT BY HIRED GUNS, BETTER KNOWN AS SESSION MUSICIANS. THIS YEAR THE ROCK AND ROLL HALL OF FAME IS FORMALLY RECOGNIZING THEIR SIGNIFICANCE BY INDUCTING FIVE OF THE GREATEST SESSION MUSICIANS TO EVER SET FOOT INTO A STUDIO – HAL BLAINE, KING CURTIS, JAMES JAMESON, SCOTTY MOORE AND EARL PALMER.
Superior session musicians were and are a breed apart. Theirs is an occupation that expects its members to sight-read musical notation quickly and accurately; to instantly transpose a part from one key to another; and to play in a wide range of styles and to emulate the licks, techniques and stylistic nuances of other notable instrumentalists; and, in some genres such as rhythm & blues, to be able to continuously develop appropriate and catchy grooves, riffs and lines for recording after recording. The latter involved what Memphis Horn trumpeter Wayne Jackson has termed "slate memory," where one creates a part, plays it for however many takes are necessary to get a satisfactory recording and then "wipes the slate clean" to begin working on the next tune.

The 1960s development of self-contained bands did not completely spell the end of session musicians, however. Country music, easy listening and movie soundtracks still relied nearly exclusively on hired hands. In the case of blues and eventually soul music, a number of small, independent record labels including Chess, Brunswick, Motown and Stax and later Malaco, Philadelphia International and Sugar Hill developed house bands where the same set of musicians were hired for virtually every session the company recorded, consequently giving all the records emanating from these labels a recognizable sound and identity. A few regional studios not necessarily tied to specific labels, such as American Sound in Memphis, Fame and Muscle Shoals in Northern Alabama and Criteria in Florida, also developed house bands, each of which acquired a formidable reputation for cutting an inordinate number of rock, pop and rhythm & blues hits.

While all of the above cited house bands were significant, the session musicians at Detroit's Motown and Stax in Memphis not only developed instantly recognizable sounds, they, in effect, created their own subgenres of music. Motown is a term that critics and fans alike use categorically to refer to a particular style of Sixties and early-Seventies soul music. The Stax sound of the same time period, for all intents and purposes, served as the basis for the genre best known as Southern soul. Recordings made in the second half of the 1960s by non-Stax artists such as Aretha Franklin, Clarence Carter and Wilson Pickett, in effect, were predicated on the sound of Stax filtered through instrumentalists and vocalists who were not affiliated with Stax. As the creators of the archetypal sounds of nearly diametrically opposed specific subgenres of contemporaneous black popular music, the Funk Brothers at Motown and Booker T. and the MG's at Stax make intriguing counterparts to one another in terms of aesthetics and technique.

Initially hitting Billboard's national charts in December 1960 with the Miracles' "Shop Around," Motown and its subsidiaries achieved unprecedented success over the next ten years. All told, in the 1960s the company placed seventy-nine singles, averaging one every six weeks, on Billboard's Top Ten pop listings. Every one of these records featured one or another permutation of the company’s house band, fondly referred to by insiders as the Funk Brothers.

While a variety of musicians appeared on one or another early session, by late 1962 the house band at Motown had coalesced around keyboardists Joe Hunter (who departed soon thereafter), Earl Van Dyke and Johnny Griffith, bassist James Jamerson, guitarists Eddie Willis, Robert White and Joe Messina, drummers Benny Benjamin and Richard "Pistol" Allen (augmented in 1964 by Uriel Jones), vibist Jack
Brokensha and percussionists Jack Ashford and Eddie "Bongo" Brown.

The guitarists came from a variety of backgrounds: Eddie Willis was largely a funky rhythm & blues player, Joe Messina had made a name for himself as a radio and TV session player and Robert White was an alumnus of the road band that had backed the Moonglows. Most of the other members of the Funk Brothers had deep-seated roots in Detroit's vibrant late-1950s jazz scene. For these cats, Motown sessions were simply a way to pay the bills, at least in the beginning. Earl Van Dyke once told writer Allan Slutsky, "All we wanted to do was play jazz, but we all had families, and at the time playing rhythm & blues was the best way to pay the rent."

Like the Motown crew, Booker T. and the MG's came together in 1962. At the time, their membership consisted of bassist Lewie Steinberg, guitarist Steve Cropper, drummer Al Jackson Jr. and keyboardist extraordinaire Booker T. Jones. In 1964 Steinberg was replaced by Cropper's childhood friend Donald "Duck" Dunn, with whom Cropper had come of age playing in an all-white band infatuated with the late-Fifties R&B of Ray Charles, Hank Ballard and, especially, the "5" Royales. Neither Cropper nor Dunn could read music, nor did they have the slightest interest in jazz. In contrast, Jackson and Jones were veterans of Memphis's leading black R&B-cum-jazz ensembles led by Al Jackson Sr. and Willie Mitchell. While these groups included some jazz-oriented numbers in their repertoire, their sound was more gutsy, down-to-earth and dance oriented than the jazz styles being played in Detroit. For all four members of the MG's, coming to work every day to craft the incendiary sounds that served as the backdrop for the testifying of Otis Redding and Sam and Dave was roughly akin to dying and going to heaven. In fact, Cropper has often stated that playing Stax sessions was like going to church every single day of the week. The soul grooves emanating out of the company's studio at 926 E. McLemore were exactly where the house band's collective hearts and musical aesthetics were at.

Up in Detroit, playing jazz at bars such as Phelps Lounge and the Chit Chat Club, the Funk Brothers got a chance to work on the music that was nearest and dearest to their hearts. When they entered the basement studio at Motown's 2648 West Grand Boulevard headquarters, they collectively transformed into the finest consummate pop craftsmen the world has ever seen, creating unending variety within what was a fairly constricted but oh-so-winning formula.

The Motown sound began with a large ensemble, a typical
that distinguished Motown from its competition involved lowed James Jamerson’s astonishingly innovative bass lines.

While there were a number of different drum grooves one (especially on Holland-Dozier-Holland productions) employed for specific records at Motown, the most common for the articulate of time. Density, the house bands at Motown and Stax had very different conceptions when it came to the articulation of time. Until the late 1960s, there were generally no high-end transients that was ubiquitous on 1960s AM pop recordings effectively served to eliminate a broad band of ground vocalists. The near absence of cymbals on Stax recordings taking the place of what at Motown would have been back-up strings, and the horns routinely played unison lines, usually emphasizing the low end of the sound spectrum and a concomitant relative absence of high frequencies. Until the late 1960s, there were generally no strings, and the horns routinely played unison lines, usually taking the place of what at Motown would have been background vocalists. The near absence of cymbals on Stax recordings effectively served to eliminate a broad band of high-end transients that was ubiquitous on 1960s AM pop hits by black and white artists. Just as was the case at Motown, the acoustic properties of the cavernous Stax studio reinforced the overall aesthetic of the house band, creating a roomy, reverberent presence that is instantly recognizable.

Overall, Stax recordings tended to have the completely opposite, “less is more” aesthetic. “The rule of thumb was sparseness,” Booker T. Jones emphasized, “making as much sound as you could with few notes.” The Stax rhythm section consisted of four, sometimes five players, all of whom tended to play sparse lines, staying well out of the way of the vocalist and leaving lots of empty space in each bar. This sense of sparseness was often compounded by the doubling of bass and guitar or bass and the left hand of the piano. The company’s recordings emphasized the low end of the sound spectrum and a concomitant relative absence of high frequencies. Until the late 1960s, there were generally no strings, and the horns routinely played unison lines, usually taking the place of what at Motown would have been background vocalists. The near absence of cymbals on Stax recordings effectively served to eliminate a broad band of high-end transients that was ubiquitous on 1960s AM pop hits by black and white artists. Just as was the case at Motown, the acoustic properties of the cavernous Stax studio reinforced the overall aesthetic of the house band, creating a roomy, reverberent presence that is instantly recognizable.

**Robert White, Jack Ashford, Bob Courser and Earl Van Dyke (L to R), 1964**

In addition to taking completely different approaches to density, the house bands at Motown and Stax had very different conceptions when it came to the articulation of time. While there were a number of different drum grooves employed for specific records at Motown, the most common one (especially on Holland-Dozier-Holland productions) that distinguished Motown from its competition involved eighth notes on the hi-hat, all four beats played with relatively equal intensity on the snare and a bass drum part that followed James Jamerson’s astonishingly innovative bass lines.

The net result was a flat four sound, the crucial component being a minimized or absent backbeat. Integral to the total effect was the way all members of the band neither played ahead nor behind the beat. Rather, the Funk Brothers sound was predicated upon all parts being played right in the middle of the beat.

In contrast, the essence of the Stax sound was based around a laid-back feel where the kick drum part would play squarely in the middle of the beat on one and three, while Jackson and Cropper, beginning with the recording of Wilson Pickett’s 1965 hit “In the Midnight Hour” (recorded at Stax although released on Atlantic), would play way behind the beat on two and four. This gesture made any uptempo record cut at Stax in the late 1960s instantly identifiable and, ultimately, defined the magic of the Stax groove.

The layering of instruments one upon another, creating a composite timbre out of the collective sounds involved, was another major ingredient of the Funk Brothers sound. The percussionists were often integral in crafting this effect, doubling one or another of the other players’ parts. A typical example occurs on the Supremes’ 1965 hit “Stop! In the Name of Love” where the main riff is played in unison on both the verse and chorus by vibes and organ. Similarly, on most classic Motown hits the tambourine either doubles the ride pattern being played on the hi-hat, or some combination of hand clapping, foot stamping, tambourine, hi-hat and snare will all play the same part.

Though there was much less use of added instrumentation at Stax, timbre figured prominently in the label’s house band sound. “You can have one thing going [on the lower keyboard],” stressed Booker T. about the organ’s diversity, and “you go to the upper keyboard, and it’s a totally different sound...” Steve got a lot of different sounds out of a Telecaster without changing any settings – just by using his fingers, his picks and his amp. The two of us could get so many sounds happening that we sounded like a big group.”
In many ways the sound of the Detroit-based Funk Brothers was that of the industrialized and heavily urbanized North—loud; intensely propulsive; and dense in terms of completely filling in the high-, mid- and low-end pitch registers, the layering of timbres on top of each other, and the rate of activity of the collective parts in every bar; yet, sophisticated at the level of harmonic sequence and chordal voicings. While gospel music was often cited by Motown artists and front-office alumni as being central to the Motown sound, the density of the Funk Brothers’ grooves was also due to Berry Gordy’s affinity for Phil Spector’s Wall of Sound and the house band’s predilection for harmonic complexity rooted in their collective backgrounds as jazz players.

Even more indicative of the industrialized North were the conditions under which the Motown musicians toiled. Gordy’s company was systematically structured both in terms of workplace environment and corporate organization with a goal to maximize profit and minimize expense. In the North, time was money and there was hell to pay if the Funk Brothers were unable to complete three or four songs during every three-hour session for which they were contracted. Essentially run like a factory, the Motown work force was compartmentalized, with horn charts being written in advance of a session and vocals being overdubbed after the rhythm track existed in finished form.

In contrast, the sound of the MG’s was that of the then largely agrarian, fraternal, small-town South—laid-back; a low level of density in all domains; and an affinity for simplicity manifested in the group’s approach to harmony and chordal voicing. The dominant influences were clearly Southern gospel and blues. Such an aesthetic was reinforced by the very different conditions within which the MG’s worked. In the South, time was not money. Much more important were notions of community and process. Consequently, the musicians at Stax were paid by the song. If it took two hours to nail it, great! If it took a day and a half, no one was too bothered about it. While this was undoubtedly a less remunerative system for the session musicians, it fostered a relaxed atmosphere where the MG’s, arranger-producer-pianist Isaac Hayes and the Memphis Horns could collectively work a groove over and over until it fused and reached the point of molten-hot, gospel-infused ecstasy. Horn charts did not exist at Stax until 1969, and through most of 1968 nearly all sessions were cut “live,” with the rhythm section, the horns and the vocalists singing and playing together as if onstage. A sense of immediacy, spontaneity and community is palpable on the recordings made in this fashion.

Out of the economic imperative of the geo-social mindset in which they worked, the Funk Brothers operated as craftsmen who were product oriented. The composition was everything. In Memphis, the magic was in the process, the product be damned. The song itself was not nearly as important as the performance. This difference is significant when one looks at the aesthetics embedded in each company’s recordings.

In the final analysis, the house bands at both Motown and Stax were among the greatest in the annals of American music. Each created an astonishing volume of glorious and distinctive music that, while defining two very different aesthetics, has more than withstood the test of time. The legacies of these two sets of session players will continue to inspire fellow musicians and fans alike.
